SUMMARY

Full stack developer focused on TypeScript: React and Next.js on the client, NestJS and PostgreSQL on the server. I come from a production e-learning platform where I owned features end to end across seven repositories and a fair amount of inherited code, with automated testing. Remote, hybrid or on-site in Mendoza, Argentina.

EXPERIENCE

Full Stack Web Developer — Olalingo

Dec 2025 – Jul 2026 · Remote

- Rebuilt the admin panel, migrating it from PHP + React to Next.js: around 20 modules (courses, classes, payments, statistics, support) shipped and made responsive in just over a month.
- Built the multi-provider payment layer that abstracted Stripe and MercadoPago behind a single interface, with a transaction ledger written from webhooks and a full teacher payout and commission flow.
- Implemented real-time support chat over WebSockets, with online presence indicators and in-app and email notifications.
- Brought testing to 5 repositories with Vitest, Playwright and Jest, including an end-to-end suite of 37 suites and 232 tests, and cleaned up inherited code: 433 ESLint errors and strict typing replacing *any*.
- Eliminated an entire class of timezone bugs by pinning a UTC contract end to end, and made class booking atomic to remove double bookings under concurrency.

Stack: Next.js, TypeScript, NestJS, PostgreSQL, Prisma, TypeORM, Socket.IO, Stripe, MercadoPago, Vitest, Playwright

Web Developer, internship — Timbring

Jul – Nov 2024

- Led the migration of the authentication system from Auth0 to NextAuth on a platform with real users in production.
- Built the responsive landing page and the sign-up form with validation.
- Implemented the password recovery flow.
- Supported the rest of the team with Next.js and Redux Toolkit.

Stack: Next.js, TypeScript, TailwindCSS, Redux Toolkit, Node.js

FEATURED PROJECT

StartMed — hospital pre-surgical management

demo and test users

- Surgery management for the Hospital Universitario (UNCuyo): operating rooms, insurance authorizations, materials and blood products, pre-anesthetic assessment and consents. Built as a team.
- Built the administration module (users and roles, audit log, catalogues, consents and pricing), integrated Cloudinary for clinical files, and owned containerisation and deployment.

Stack: Laravel 13, PHP, MySQL, Docker, Cloudinary, Render

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript (ES6+), React, Next.js, Redux Toolkit, TailwindCSS, responsive design

Backend: Node.js, NestJS, REST APIs, NextAuth / JWT, WebSockets (Socket.IO), Stripe and MercadoPago (webhooks and reconciliation)

Data: PostgreSQL, MongoDB, Prisma, TypeORM, SQL

Testing: Vitest, Jest, Playwright, Testing Library, Supertest

Tools: Git, GitHub, Docker, Vercel, Postman, CI/CD, Claude Code

EDUCATION & LANGUAGES

- Training programme in Software Development for Hospital Management and Biomedical Technologies — Hospital Universitario, UNCuyo (May 2026 – ongoing)
- Higher Technical Degree in Software Development — Instituto Superior Manuel Belgrano (2026 – ongoing)
- Full Stack Web Developer — Henry Bootcamp (2022 – 2023)
- PC Repair Technician (2015) and Electrician Technician, electronics orientation (2012) — Mendoza, Argentina
- **Languages:** Spanish native · English advanced (reading, writing, speaking)
